

theoretical analysis and simulation show that the proposed control strategy can improve the stability of the system and eliminate the $6m \pm 1$ harmonics with fewer steady-state errors and a faster convergence speed when compared to the traditional control strategy. The good performance of the dynamic process is verified by the experimental results.

ACKNOWLEDGMENT

This work is supported in part by the Project Funded by the Academic Program Development of Jiangsu Higher Education institutions (PAPD).

Yifan Wang was born in China, in 1991. He received his B.S. degree from Jiangsu University, Zhenjiang, China, in 2015, where he is presently working toward his M.S. degree in Electrical Engineering. His current research interests include grid-connected inverters, power electronics and power quality control.

Hong Zheng was born in Anhui, China. He received his B.S. and Ph.D. degrees in Power Electronics and Drives Engineering from Jiangsu University, Zhenjiang, China, in 1987 and 2011, respectively. He worked as a Chief Engineer in the Xi'an Power Electronics Research Institute, Xi'an, China. Since 2009, he has been working as a Professor in the School of Electrical and Information Engineering Jiangsu University. His current research interests include power electronic converters, custom power technology and power quality control technology for smart grids, distributed generation and energy storage technology.

Ruoyin Wang was born in China, in 1991. He received his B.S. degree from the Jiangsu University of Science and Technology, Zhenjiang, China, in 2013. He is presently working toward his M.S. degree in Electrical Engineering from Jiangsu University, Zhenjiang, China. His current research interests include power electronics, photovoltaic inverters and electric drives.

Wen Zhu was born in China, in 1992. He received his B.S. degree from the Jingjiang College of Jiangsu University, Zhenjiang, China, in 2015. He is presently working toward his M.S. degree in Electrical Engineering from Jiangsu University, Zhenjiang, China. His current research interests include power electronics and AC-DC converters.
